

Project Requirements Document

Prama Academy Upgrade & Feature Development

1. Frontend Revamp

Objective

Upgrade the current frontend for better performance, modern UI, and improved mobile experience.

Scope of Work

- Rebuild existing React (Create React App) project using **React + Vite**
- Implement **mobile-first responsive design**
- Optimize UI specifically for phone users
- Reduce loading time
- Improve performance and bundle size
- Implement cleaner, modern, and professional UI design
- Improve overall user experience (UX)

Expected Outcome

- Faster website performance
- Better SEO readiness
- Smooth mobile experience
- Modern and scalable frontend architecture

2. Backend Development + Admin Panel

Objective

Build a backend system with a fully functional admin panel for dynamic content management.

Backend Development

- Build backend using:
 - Node.js + Express (recommended)
 - OR any preferred backend framework
- REST API development
- Secure authentication system for admin

Database

- MongoDB (NoSQL)
- OR
- PostgreSQL (SQL)

Admin Panel Features

Admin should be able to:

- Upload files (PDFs, documents, media)
- Change images across the website
- Update website content (text, courses, team, etc.)
- Manage dynamic sections without developer support
- Control visibility of certain content (if needed)

Expected Outcome

- Fully dynamic website
 - No need to edit frontend code for content changes
 - Centralized content management system
-

3. Flash Anzan Module

Objective

Develop a mental calculation practice tool similar to Soroban exams.

Features

- Numbers flash on screen
- Student calculates mentally
- Answer submission system
- Adjustable speed control
- Digit control (number length selection)
- Practice history tracking
- Replay option
- Text-to-Speech support for audio number reading

Expected Outcome

- Interactive mental math training tool
- Adjustable difficulty levels
- Engaging user experience

4. Screen Recording Feature

Objective

Allow users to record their screen directly from the browser.

Features

- Record button inside browser
- User can choose:
 - Current Tab
 - Specific Window
 - Entire Screen
- Browser permission popup required
- Start / Stop recording
- Download recording file after completion
- No backend required (frontend-based implementation)

Expected Outcome

- Easy screen recording functionality
- Secure and browser-permission-based system
- Lightweight implementation

Suggested Tech Stack

Frontend:

- React + Vite
- Tailwind CSS / Custom CSS

Backend:

- Node.js + Express

Database:

- MongoDB or PostgreSQL

Other Tools:

- MediaRecorder API (for screen recording)
- Web Speech API (for text-to-speech in Flash Anzan)

Overall Project Goals

- Modernize the system
 - Improve speed and performance
 - Make website fully dynamic
 - Add interactive learning tools
 - Provide admin-level content control
 - Ensure mobile-first experience
-

Website Cost Breakdown Report

1 Domain Cost (2 Years)

- .COM Domain Registration: ₹2,398
- Discount: -₹460
- Full Domain Protection (2 Years): ₹1,098
- Subtotal: ₹3,036
- Taxes: ₹551.73
- ICANN Fees: ₹29.16

✓ Total Paid (Domain + Protection) = ₹3,616.89

2 Web Hosting Cost (3 Years)

- Hosting Plan: Economy (3 Years)
- Subtotal: ₹7,884
- Taxes: ₹1,419.12

✓ Total Paid (Hosting) = ₹9,303.12

3 SSL Certificate Cost (1 Year)

- Standard SSL Renewal: ₹4,999
- Taxes: ₹899.82

✓ Total Paid (SSL) = ₹5,898.82

Total Investment So Far

Service	Amount
Domain (2 Years)	₹3,616.89
Hosting (3 Years)	₹9,303.12
SSL (1 Year)	₹5,898.82
Total Spent	₹18,818.83

Currently Service charge

- Simple average per service = ₹6,272.94
- Actual yearly running cost ≈ **₹10,808 per year**

For backend

Item	Yearly Cost
Render Backend	₹7,000
MongoDB Free Tier	₹0

Total

₹7,000 per year

Total

Frontend currently godaddy service = ₹10808/year

Backend with render = ₹7000/year
